

Yarra Consortium User Manual

Role-based operating guide, generated from the live application

Covers every module as currently implemented, for Super Admins, School Admins,
Teachers, Students, and Vendors.

Regenerate with: `python scripts/generate_user_manual.py`

Table of Contents

1. Role Access Matrix

5. Administration Checklist

1. Role Access Matrix

Module	Super Admin	School Admin	Teacher	Student	Vendor
Dashboard	Full	Own school	Limited	No	No
User Management	Full (all schools)	Own school (max 2 admins, 5 teachers)	No	No	No
School Onboarding	Creates (basic data)	Completes extended profile	No	No	No
School Profile / Dashboard	Full	Own school (edit)	View	No	No
Payments & Invoices	Full (any school)	Own school	No	Own invoice	No
Events	Create / edit / delete	View, manage school participation	View	Register & pay	No
Student Exchange	Oversight	Create / manage	View & apply	No	No
Content Library	Approve / reject	Submit	View / comment	No	No
Vendor Sign-up	Approves	No	No	No	Applies
Vendor Marketplace	Approve promotions	Enquire / request	Enquire / request	No	Managed via Admin
Vendor Event Interest	Notified	No	No	No	Applies
School Network	View	View & contact	View only	No	No
School Review	View	Edit (Leader/Admin/PL Teacher)	View	No	No
Leadership Connect	No	Yes (Leader/Admin only)	No	No	No
Notifications & Activity	Sees all activity	Own	Own	Own	No
Consortium Analytics	Yes (direct URL)	No	No	No	No

2. Role-Based User Stories

Super Admin

- Create a school with just its name, state/country, and Yarra Coordinator contact, and let the invite handle the rest.
- See total schools, revenue (manual payments + verified event fees), and pending approvals in one dashboard.
- Cap every school at 2 admins and 5 teachers so accounts stay under control.
- Create, edit, and delete Yarra-wide events, with registrations and results cleaned up automatically on delete.
- Review and approve school-submitted content before it reaches other schools.
- Approve vendors and their promotions before they appear in the marketplace.
- Get notified the moment any meaningful activity happens anywhere on the platform.

School Admin

- Invite teachers and a second admin by email, without needing an upload template.
- See our own school's membership, payments, and dashboard data -- never another school's.
- Record a payment (including cheque) if the bank transfer confirmation is still pending.
- Post a teacher/student exchange listing with an exact start and end date.
- Submit content for the library and know it stays private until Yarra approves it.
- Contact another school's Yarra Coordinator directly from the School Network.

Teacher

- View events, exchanges, content, vendors, and the school network without needing edit access.
- View Open, Applied, Under Review, and Matched exchanges, and apply to open ones.
- Browse the content library and filter by type, but not create or edit posts.
- Browse the school network for collaboration ideas, without being able to contact other schools directly.

Student

- Register for an active event and pay online via Razorpay, or upload proof if online payment isn't configured.
- Download a PDF invoice once my payment is verified.
- Submit feedback for an event once I've attended it.

Vendor

- Apply through Vendor Sign-up with our brochure and catalog, and wait for Super Admin approval.
- Send enquiries to schools and track their status once approved.
- Apply to support an upcoming Yarra event and know the Super Admin will see the request.

3. Module Manuals

1. Login & Sessions

Purpose: Authenticate every user and route them into their role-scoped workspace.

Roles: All users.

Workflow

- 1 User opens the home page and clicks Login.
- 2 Signs in with username or email + password, or via Google/Microsoft SSO if configured for the site.
- 3 A session is created; the sidebar shows only the modules the user's role can access.
- 4 User logs out to clear the session.

User Stories

- As any user, I want to log in with either my username or email so I don't need to remember which one I registered with.
- As a Super Admin, I want a Master Dashboard link so I can manage every school from one console.

Acceptance Expectations

- Invalid credentials show a clear inline error, not a generic failure.
- SSO buttons only render when a provider is actually configured.
- Navigation hides links the current role cannot use.

2. Super Admin Dashboard

Purpose: Give the Super Admin a live snapshot of the whole consortium.

Roles: Super Admin.

Workflow

- 1 Log in as a superuser; the Command Centre dashboard loads automatically.
- 2 Metrics (total/active schools, expiring memberships, revenue, pending vendors, flagged comments) are computed live from current data -- nothing is hand-entered.
- 3 Drill into pending vendor approvals or flagged content directly from the same screen.

User Stories

- As a Super Admin, I want schools, revenue, and pending approvals visible in one place so I don't have to check every module separately.

Acceptance Expectations

- Revenue = sum of verified event registration fees + every manually recorded Payment, not a flat estimate.
- Metrics recalculate automatically as schools/events/payments are added -- no manual refresh step.

3. Master Dashboard / School Directory

Purpose: Let the Super Admin browse and jump into any member school.

Roles: Super Admin only.

Workflow

- 1 Open Master Dashboard from the sidebar.
- 2 See every school with membership tier, user count, and event count.
- 3 Use the school-selector dropdown, or "Add New School", to act on a specific school.

User Stories

- As a Super Admin, I want to open any school's profile directly from a dropdown instead of hunting through a list.

Acceptance Expectations

- The selector navigates straight to that school's profile page.

4. User Management

Purpose: Give schools and the Super Admin a controlled way to add staff logins.

Roles: Super Admin (all schools). School Admin / School Leader (own school only).

Workflow

- 1 Admin or School Leader opens Invite User and enters an email + role.
- 2 The system checks the school hasn't hit its cap -- max 2 admins, max 5 teachers, counting pending invitations as well as active accounts.
- 3 An invitation link is generated (shown on screen; no email sending is wired up yet).
- 4 The invitee opens the link and sets a password; their account email is locked to the address that was invited.
- 5 Super Admin can additionally browse every school's users, each one's last sign-in, and their recent activity.

User Stories

- As a School Admin, I want to invite a teacher by email without setting a password for them myself.
- As a School Admin, I want to be blocked from exceeding 5 teachers so I don't over-provision by accident.
- As a Super Admin, I want to see every school's users, last sign-in, and recent actions in one place.

Acceptance Expectations

- Caps count pending (unaccepted) invitations, not just accepted ones -- re-inviting past the limit is rejected.
- The created account's email always matches the invited address, never whatever the invitee types at signup.
- There is no bulk/Excel upload by design -- invitations are one at a time.

5. School Onboarding / Registration

Purpose: Create a new member school in two stages -- Super Admin fills the minimum, the school fills the rest.

Roles: Super Admin (creates). School Admin (completes).

Workflow

- 1 Super Admin enters school name, state, country, and the Yarra Coordinator's name/email/phone.
- 2 An invitation (role = Admin) is sent to the coordinator's email.
- 3 The coordinator accepts and sets a password; their login email is locked to the invited address.
- 4 The school profile shows a "Complete Your Profile" banner until the extended profile -- curriculum/board, learner count, principal contact, vision, infrastructure, and up to 10 supporting documents -- is submitted.

User Stories

- As a Super Admin, I want to onboard a school in seconds and let the school fill in the detail later.
- As a School Admin, I want a clear prompt telling me exactly what's still missing from our profile.

Acceptance Expectations

- The profile-completed flag only flips once the extended form is actually submitted.
- A public self-registration form also exists as a fallback path outside the Super-Admin-initiated flow.

6. School Profile / School Dashboard

Purpose: The school's home base -- branding, membership status, and admin actions.

Roles: Super Admin (any school). School Admin / School Leader (own school, editable). Others (view own school).

Workflow

- 1 View logo, location, contact person, membership tier, and social links.
- 2 School Admin edits branding, contact details, and social links; uploads a logo.
- 3 Admin panel links out to Complete Extended Profile, Invite Staff, User Management, and Record Payment.

User Stories

- As a School Admin, I want to update our logo and social links myself.
- As a Super Admin, I want to open and, if needed, edit any school's profile from the Master Dashboard.

Acceptance Expectations

- Only School Leader/Admin roles can edit; everyone else gets a read-only view.

7. Payments & Invoices

Purpose: Record and track membership and event payments.

Roles: Super Admin (any school). School Admin (own school). Student (own invoice).

Workflow

- 1 Open Record Payment; Super Admin chooses which school, School Admin is auto-scoped to their own.
- 2 Enter amount, method (online / cheque / bank transfer / cash / other), notes, and an optional receipt file.
- 3 Students separately download a PDF invoice once their event registration payment is verified.

User Stories

- As a Super Admin, I want to record a cheque payment on a school's behalf if their admin can't.
- As a Student, I want a proper invoice once my payment clears.

Acceptance Expectations

- Cheque is a supported payment method, per the explicit requirement.
- Dashboard revenue includes every manually recorded payment, not just online ones.

8. Events

Purpose: Run Yarra-wide competitions, workshops, and opportunities.

Roles: Super Admin (create/edit/delete). School Admin & Teacher (view, manage own school's participation). Student (register).

Workflow

- 1 Super Admin creates an event: category, format, capacity, Pro-Bono or Paid fee type, registration link, brochure.
- 2 Every school sees the event -- it is not scoped to one school.
- 3 Students register; Razorpay checkout runs if configured, otherwise a manual payment-proof upload is accepted.
- 4 School staff mark attendance and log competition results for their own school's students.
- 5 After the event, a recording link and presentation file can be attached.
- 6 Deleting an event cascades its registrations and results -- no orphan records are left behind.

User Stories

- As a Super Admin, I want to create Yarra events so every member school can take part.

- As a School Admin, I want to track which of our students registered and attended.
- As a Student, I want to register and pay, and get a certificate-ready attendance record.

Acceptance Expectations

- Create, edit, and delete permissions exist only for Super Admin.
- Participant Records (grouped by school) are reached from the event page, not the main dashboard.

9. Student Exchange Programs

Purpose: Match one school's teacher/student exchange offer with another school.

Roles: School Admin (create/manage). Teacher (view/apply, message).

Workflow

- 1 School Admin posts a listing: type, subject/grade, exact start and end dates, objectives.
- 2 Other schools browse open listings and apply with a message.
- 3 The listing owner reviews applications (Pending -> Under Review -> Approved/Rejected); approving one auto-rejects the rest and marks the listing Matched.
- 4 Matched schools exchange messages through the application thread.
- 5 The owner marks the exchange Completed; both sides submit a rating and comments.

User Stories

- As a School Admin, I want to post a listing so another school can apply.
- As a Teacher, I want to see Open, Applied, Under Review, and Matched exchanges and apply to open ones.

Acceptance Expectations

- Visibility is role-filtered: School Admin sees Open/Applied/Matched; Teacher additionally sees Under Review.
- Messages are scoped to the specific matched application, not visible platform-wide.

10. Content Library

Purpose: Share Yarra-curated learning resources, gated by Super Admin approval.

Roles: Super Admin (approve/reject). School Admin (submit). Teacher & all staff (view/search/filter/comment).

Workflow

- 1 School Admin submits an article, podcast, video, or announcement.
- 2 It saves as Pending Yarra Verification -- invisible to every other school until approved.
- 3 Super Admin reviews the queue and approves (publishes) or rejects (returns to draft, submitter notified).
- 4 Approved content is searchable/filterable by type and category, and gated by Early-Years membership and any target-school list.

User Stories

- As a School Admin, I want to submit a workshop recording and know it stays private until Yarra approves it.
- As a Super Admin, I want to curate the library before anything goes live.
- As a Teacher, I want to browse and filter content, without being able to create or edit posts.

Acceptance Expectations

- Pending content never appears to other schools.
- Only School Admin roles can submit; comments are open to any authenticated viewer.

11. School Network

Purpose: A directory of every member school, for collaboration discovery.

Roles: Super Admin, School Admin, Teacher (all view-only except own school).

Workflow

- 1 Browse school cards: name, location, state/country, curriculum/board, learner count, specialties.
- 2 Own school links to its profile.
- 3 Other schools show a "Contact via Yarra Coordinator" action for School Admin roles only, or a locked placeholder for everyone else.

User Stories

- As a Teacher, I want to browse the network for collaboration ideas, even though I can't contact schools directly.
- As a School Admin, I want to reach out to another school's Yarra Coordinator directly from their card.

Acceptance Expectations

- The Contact action only renders for School Admin / School Leader roles.

12. Vendor Sign-up

Purpose: Let prospective vendors apply to join the marketplace.

Roles: Vendor applicant (any logged-in user, acting on the vendor's behalf). Super Admin (approves).

Workflow

- 1 Open Vendor Sign-up and submit name, category, description, contact details, website, logo, brochure, and catalog.
- 2 The application saves as unapproved.
- 3 Super Admin approves via Django Admin, which unlocks marketplace visibility.

User Stories

- As a vendor, I want to submit our brochure and catalog alongside our profile so schools can properly evaluate us.

Acceptance Expectations

- Unapproved vendors never appear in the public marketplace listing.

13. Vendor Marketplace

Purpose: Let schools discover approved vendors and send enquiries; let vendors run promotional campaigns.

Roles: Super Admin (approve vendors/promotions). School Admin & Teacher (browse, enquire).

Workflow

- 1 Browse/search/filter approved vendors by category.
- 2 Open a vendor profile and send a subject + message enquiry.
- 3 Track sent enquiries under My Requests, with an Open/Responded status.
- 4 Super Admin separately approves promotional banners before they surface on the marketplace.

User Stories

- As a School Admin, I want to send a procurement enquiry and track whether the vendor has responded.
- As a Super Admin, I want to control which promotions actually surface.

Acceptance Expectations

- Enquiries are scoped to the sender's own school under My Requests.

14. Vendor Event Interest

Purpose: Let approved vendors flag interest in supporting a specific Yarra event.

Roles: Vendor (any logged-in user acting for an approved vendor). Super Admin (notified).

Workflow

- 1 From an event's page, choose an approved vendor and submit an interest message.
- 2 Every Super Admin is notified immediately.

User Stories

- As a vendor, I want to apply to be part of an upcoming Yarra event and know the Super Admin will see it.

Acceptance Expectations

- Only approved vendors are selectable in the form.

15. School Review

Purpose: Track a school's self-study, review visit, School Improvement Plan, and recommendations cycle.

Roles: School Leader, Admin, PL Teacher (edit). All staff (view).

Workflow

- 1 Create a review cycle.
- 2 Update status, dates, and a supporting document for each of the four stages.
- 3 Browse previously archived cycles.

User Stories

- As a PL Teacher, I want to log our self-study progress and attach the supporting document.

Acceptance Expectations

- Only the active cycle is editable; archived cycles are read-only.

16. Leadership Connect

Purpose: A private discussion forum for School Leaders and Admins across the consortium.

Roles: School Leader / Admin only.

Workflow

- 1 Start a thread.
- 2 Other leaders reply.
- 3 The thread creator can lock it with a summary of key takeaways.

User Stories

- As a School Leader, I want to discuss policy questions with peers at other schools.

Acceptance Expectations

- Teachers and students cannot open this module.

17. Notifications & Activity Log

Purpose: Keep every role aware of state changes relevant to them, and give Super Admin visibility into all platform activity.

Roles: All (own notifications). Super Admin (sees an activity feed of everyone's actions).

Workflow

- 1 A badge shows the unread count; opening a notification marks it read and deep-links to the relevant record.
- 2 Nearly every state-changing action -- invites, payments, event registration, exchange applications, content submission, vendor enquiries -- also writes an Activity Log entry, visible on the User Management page.

User Stories

- As a Super Admin, I want any activity on the app to trigger a notification that lands here.

Acceptance Expectations

- Notifications never grant access beyond what the recipient's role already has.

18. Consortium Analytics Dashboard

Purpose: A secondary, consortium-wide metrics view -- schools, students, teachers, events, exchanges, vendors, and a school engagement ranking.

Roles: Super Admin / Admin.

Workflow

- 1 Open the dashboard directly at /analytics/dashboard/.

User Stories

- As a Super Admin, I want to rank schools by engagement across registrations, enquiries, and exchange listings.

Acceptance Expectations

- Note: this module is currently reachable only by direct URL -- it is not yet linked from the sidebar navigation.

4. Key Operating Lifecycles

School Onboarding

- 1 Super Admin creates the school with basic data
- 2 Invitation sent to the Yarra Coordinator email
- 3 Coordinator accepts and sets a password (email locked to invite)
- 4 "Complete Your Profile" banner shown
- 5 Extended profile + documents submitted
- 6 profile_completed flag set to True

Event Management

- 1 Super Admin creates the event
- 2 Every school views and students register (+ pay)
- 3 Staff mark attendance and log results for their own school
- 4 Recording link / presentation attached post-event
- 5 (Optional) Super Admin deletes -- registrations and results cascade-delete

Exchange Program

- 1 Listing posted -- Open
- 2 Application submitted -- Pending
- 3 Owner reviews -- Under Review
- 4 Owner approves -- Approved, listing becomes Matched, other applications auto-Rejected
- 5 Exchange runs, then marked Completed
- 6 Both sides submit rating + comments

Content Publishing

- 1 School Admin submits post
- 2 Saved as Pending Yarra Verification
- 3 Super Admin reviews
- 4 Approved -> Published (visible to all permitted schools) OR Rejected -> back to Draft, submitter notified

Vendor Approval

- 1 Vendor submits sign-up (with brochure/catalog)
- 2 Status: unapproved
- 3 Super Admin reviews via Django Admin
- 4 Approved -- vendor appears in the marketplace and can receive/apply to event interest

Payment (Event Registration)

- 1 Student registers for a paid event
- 2 Razorpay order created (if configured) or manual proof uploaded
- 3 Payment verified or failed
- 4 Invoice PDF downloadable once verified

5. Administration Checklist

- Confirm each new school's Yarra Coordinator email is correct before sending the invite -- their login is permanently locked to it.
- Enforce the 2-admin / 5-teacher caps by removing an inactive user before approving a new invite past the limit.
- Review the Content Review queue regularly so submissions don't sit pending indefinitely.
- Approve vendors via Django Admin before they can appear in the marketplace or receive event-interest applications.
- Delete an event only when certain -- it permanently removes every registration and result tied to it.
- Regenerate this PDF after major module changes by running `python scripts/generate_user_manual.py`.
